

Guess who needs a flu shot?

**YOUR
CHILD &
FAMILY**

If your child has:

- Asthma or other lung disease
- Diabetes
- Sickle cell anemia or thalassemia
- Heart disease
- Kidney disease
- A weakened immune system
- A condition requiring long-term aspirin therapy

The flu can be very dangerous for your child.

Flu shots can protect your child and your family from getting sick.

Check with your doctor to schedule flu shots for your child and family today!
